NetPro Management Suite

Active Directory provides the storage, access methods and security for not only the operating system, but also the applications that use its services. For these reasons, it is vital to ensure Active Directory's health, security and compliance through constant vigilance and powerful best practices. Exchange and File Servers are no different. Highly visible infrastructure services that enable productivity and store confidential information, Exchange and File Servers demand equal attention if they are to remain secure, compliant and available.

For managing the enterprise-wide Windows infrastructure, no solution set is more comprehensive than the NetPro Management Suite (NMS). NMS combines the power of NetPro's advanced Diagnostics for Active Directory (DAD) suite with the only complete Security and Compliance Suite (SCS), with modules for Active Directory, Exchange and File Servers. With NMS, organizations introduce a best practices system for infrastructure health, security and control that dramatically reduces the risks of degradation, downtime, business-crippling security breaches, and non-compliance with government regulations such as HIPAA and SOX.

ChangeAuditor
Real-Time Auditing for Windows

- Details the 5 Ws of Active Directory, Exchange and File Server changes
- Drives compliance with custom reports, published on the web
- Monitors and reports on compliance initiatives from a centralized dashboard
- Provides real-time insight into approved and unapproved changes
- Tightens internal controls
- Includes built-in alert library for fast and convenient reference
- Cuts downtime, speeds Mean Time to Repair by auditing changes as they happen
- Deploys fast with no consulting or training costs
- Enables streamlined Windows management through integration with MOM and other platforms

SecurityManager
Active Security and Policy Management

- Provides active security monitoring and policy enforcement for Active Directory and File Servers
- Includes new policies for:
    - Object Locking
    - Group Membership
    - Separation of Duties
- Enables automatic remediation
- Bakes in regulatory compliance references and standards comparison
- Customizes best practices for improved policy implementation and enforcement
- Alerts on security issues instantly, cutting downtime and security breaches
- Integrates with MOM and other management platforms

NETPRO

DirectoryTroubleshooter
### Automated Troubleshooting & Repair for Active Directory

- Enables real-time diagnosis of remote DCs
- Analyzes Active Directory health via built-in health checks
- Offers more than 100 customizable tests and baselines
- Automates repairs such as replication tuning and user account management
- Includes a comprehensive replication management console
- Performs DC baselining and benchmarking over time
- Delivers Active Directory security configuration reports

DNSAnalyzer
Proactive DNS Diagnostics & Alerting

- Detects business-crippling DNS issues on all flavors of DNS server (Microsoft, BIND, QIP, etc.)
- Cuts troubleshooting with on-demand diagnostics and knowledge base
- Promises 100% consistency between Active Directory and DNS records:
    - SRV records
    - Active Directory domain delegation
ChangeManager
Active Directory Change Control & Workflow Management

- Delivers user-defined reports for current and historical reference
- Automates workflow for implementing GPO changes within Active Directory
- Implements changes automatically, reducing associated risks and costs
- Enables users to embrace new business initiatives such as ITIL and MOF
- Reports on "changes made but not approved" and "approved changes not implemented"

DirectoryAnalyzer
Real-Time Diagnostics & Alerting for Active Directory

- Diagnoses all of Active Directory's critical conditions in real-time
- Provides real-time diagnostics and statistics to identify directory issues
- Provides Smartlink integration with NetPro's ChangeAuditor and DirectoryTroubleshooter solutions, creating a true AD Health Console
- Troubleshoots Domain Controller connectivity
- Delivers a comprehensive knowledge base for context-sensitive solutions
- Provides multi-forest views from a single dashboard
- Highlights the impact of Active Directory on Exchange
- Provides two-way synchronous communications between the DirectoryAnalyzer Health Console and the MOM console.

NetPro sets the Gold Standard for distributed infrastructure management. We build decades of experience into every enterprise solution, ensuring that our customers can manage the security, compliance and health of their Windows, DNS, MIIS, and Exchange environments with total, unparalleled confidence. Our solutions enable organizations to improve security and policy compliance, increase access availability, prevent costly disruptions, and enhance management efficiencies. NetPro counts the U.S. Army, Volvo, and Coors Brewing among its many customers.
